**DETAILED ACTION**

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I. Claim(s) 1-3, drawn to a device utilizing a sampled grating structure having a chirped sampling period, wherein the grating structure is arranged in a manner such that, in use, a dispersion characteristic of the grating structure is substantially proportional to the inverse of a non-linear dispersion function over a selected wavelength range, classified in class 385, subclass 37.

Group II. Claim(s) 4 and 5, drawn to a device that combines a square reflection band filter and a sampled grating having a chirped sampling period, classified in class 359, subclass 130.

Group III. Claim 6, drawn to a method for producing a grating structure, classified in class 385, subclass 37.

Group IV. Claim(s) 7-8, drawn to a method for using a sampled grating structure to produce a zero dispersion WDM channel, classified in class 359, subclass 24.

Because these inventions are distinct for the reasons given above and the search required for each Group is separate and distinct from each of the other groups, restriction for examination purposes as indicated is proper.

The inventions; Group I, Group II, Group III and Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

In the instant case; the Group I invention relates to a device utilizing a sampled grating with a chirped sampling period, the Group II invention relates to a device that combines a square reflection band filter and a sampled grating with a chirped sampling period, the Group III invention relates to a method of producing a sampled grating structure, and Group IV relates to a method of producing a zero dispersion WDM channel utilizing a sampled grating with a chirped sampling period.

### ***Conclusion***

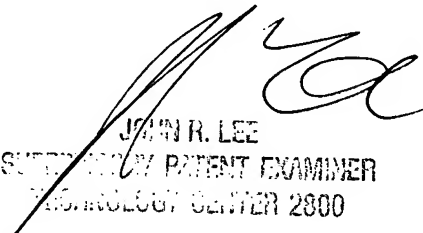

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
